**Approach adopted for valuation: Sales Comparison Approach**

- The sales comparison approach uses the market data of sale prices to estimate the value of a real estate property. Property valuation in this method is done by comparing a property to other similar properties that have been recently sold. Comparable properties, also known as comparable, or comps, must share certain features with the property in question. Some of these include physical features such as square footage, number of rooms, condition, and age of the building; however, the most important factor is no doubt the location of the property.
- Adjustments are usually needed to account for differences as no two properties are exactly the same. To make proper adjustments when comparing properties, real estate appraisers must know the differences between the comparable properties and how to value these differences.
- The sales comparison approach is commonly used for Industrial Unit, where there are typically many comparable available to analyze.
- As the property is a Industrial Unit, we have adopted Sale Comparison Approach Method for the purpose of valuation.
- The Price for similar type of property in the nearby vicinity is in the range of ₹ 4,500.00 to ₹ 7,000.00 per Sq. Ft. on Carpet Area Considering the rate with attached report, current market conditions, demand and supply position, Unit size, location, upswing in real estate prices, sustained demand for Industrial Unit, all round development of residential application in the locality etc. We estimate ₹ 5,500.00 per Sq. Ft. on Carpet Area for valuation.

No currently known deleterious or hazardous materials or suspect techniques will be used in the construction of or subsequent alteration or additions to the property and comments made in the property details do not purport to express an opinion about, or advise upon, the condition of uninspected parts and should not be taken as making an implied representation or statement about such parts

### Valuation Methodology

The sales comparison approach uses the market data of sale prices to estimate the value of a real estate property. Property valuation in this method is done by comparing a property to other similar properties that have been recently sold. Comparable properties, also known as comparable, or comps, must share certain features with the property in question. Some of these include physical features such as square footage, number of rooms, condition, and age of the building; however, the most important factor is no doubt the location of the property. Adjustments are usually needed to account for differences as no two properties are exactly the same. To make proper adjustments when comparing properties, real estate appraisers must know the differences between the comparable properties and how to value these differences.

The sales comparison approach is commonly used for Industrial Unit, where there are typically many comparable available to analyze. As the property is a Industrial Unit, we have adopted Sale Comparison Approach Method for the purpose of valuation.

In case of inadequate recent transaction activity in the subject micro-market, the appraiser would collate details of older transactions. Subsequently, the appraiser would analyse rental / capital value trends in the subject micro-market in order to calculate the percentage increase / decrease in values since the date of the identified transactions. This percentage would then be adopted to project the current value of the same.

Where reliance has been placed upon external sources of information in applying the valuation methodologies, unless otherwise specifically instructed by Client and/or stated in the valuation, VCIPL has not

independently verified that information and VCIPL does not advise nor accept it as reliable. The person or entity to whom the report is addressed acknowledges and accepts the risk that if any of the unverified information in the valuation is incorrect, then this may have an effect on the valuation.
