The sales comparison approach uses the market data of sale prices to estimate the value of a real estate property . Property valuation in this method is done by comparing a property to other similar properties that have been recently sold. Comparable properties , also known as comparables , or comps , must share certain features with the property in question . Some of these include physical features such as square footage, number of rooms, condition , and age of the building; however, the most important factor is no doubt the location of the property . Adjustments are usually needed to account for differences as no two properties are exactly the same. To make proper adjustments when comparing properties , real estate appraisers must know the differences between the comparable properties and how to value these differences . The sales comparison approach is commonly used for Residential Flat , where there are typically many comparables available to analyze. As the property is a residential Flat , we have adopted Sale Comparison Approach Method for the purpose of valuation . The Price for similar type of property in the nearby vicinity is in the range of ₹ 17,000.00 to ₹ 22,000.00 on Built up area. Considering the rate with attached report , current market conditions , demand and supply position, Flat size, location, upswing in real estate prices , sustained demand for Residential Flat , all round development of commercial and residential application in the locality etc. We estimate ₹ 17,496.00 per Sq. Ft. on Built up area for valuation.

### Valuation Methodology

For the purpose of this valuation exercise, the valuation methodology used is Direct Comparison Approach Method and proposed Highest and Best Use model is used for analysing development potential.

The Direct Comparison Approach involves a comparison of the property being valued to similar properties that have actually been sold in arms - length transactions or are offered for sale. This approach demonstrates what buyers have historically been willing to pay (and sellers willing to accept) for similar properties in an open and competitive market and is particularly useful in estimating the value of the Flat and properties that are typically traded on a unit basis.

In case of inadequate recent transaction activity in the subject micro-market, the appraiser would collate details of older transactions. Subsequently, the appraiser would analyse rental / capital value trends in the

subject micro-market in order to calculate the percentage increase / decrease in values since the date of the identified transactions. This percentage would then be adopted to project the current value of the same.

Where reliance has been placed upon external sources of information in applying the valuation methodologies, unless otherwise specifically instructed by Client and/or stated in the valuation, VCIPL has not independently verified that information and VCIPL does not advise nor accept it as reliable. The person or entity to whom the report is addressed acknowledges and accepts the risk that if any of the unverified information in the valuation is incorrect, then this may have an effect on the valuation.
