Date: 20/05/2024

To,

Relationship Manager & Chief Manager, AMT-III, Commercial Clients Group **State Bank of India, Commercial Branch Mumbai,** Second Floor, N.G.N. Vaidya Marg, Horniman Circle, Fort, Mumbai - 400 001. Ph: 022-4175-1212.

Ref: Banks email dated 18/05/2024.

CERTIFICATE

Pursuant to the request from The Relationship Manager & Chief Manager, AMT-III, Commercial Clients Group, State Bank of India, Commercial Branch Mumbai, Second Floor, N.G.N. Vaidya Marg, Horniman Circle, Fort, Mumbai - 400 001.,we have inspected the Hospital assets/Equipment's for **M/s.** Nishkala Healthcare Private Limited (Proposed Purchaser) which is reportedly owned by **M/s Suasth Health Care (India)** Private Limited (Earlier Known as M/s Aermid Health Care (India) Pvt. Ltd.), inspected at "Suasth Multispecialty Hospital "situated at Plot No. 01, Sector No. 20, Opp. Navi Mumbai Police Headquarters, Roadpali Road, Kalamboli, Maharashtra – 410 218 on 08/01/2024, so as to certify usability of machines, vintage of machinery and obsolescence factor and residual life of machinery. Please read this certificate / opinion in continuation with our valuation report bearing Ref. No. 01/MJA24-027/ANM/L dated 13/01/2024 submitted to State Bank of India, SME Fort, Mumbai.

While deriving residual life of the machinery various important factors such as present condition, its maintenance, usability, technical obsolescence etc. were given due consideration.

The machines were inspected on 08 January, 2024, while doing valuation of the assets. At the time of inspection, hospital was not in operation from last more than 1.5 years. Working of few machines was shown by the client's representative, which was found satisfactory. All the machines were found in well maintained condition.

This report has 14 pages [including copy of documents + Invoice + photographs]

Thanking you,

Yours faithfully, For Thite Valuers & Engineers Pvt. Ltd.

L. M. Sarvaiya (BE. Mech.) PANEL VALUER STATE BANK OF INDIA Shekhar L. Thite PANEL VALUER STATE BANK OF INDIA

Details of Plant and machineries are as under

(Total life expectancy in based on guidelines of Dept. of Income Tax, Govt. of India).

As desired by you, we have given equipment purchase year and residual life in above table. Other comments with regards to usability, vintage, obsolescence, new or old machines as per our opinion are as under.

Medical equipment is characterized by wide range, variety and high rate of obsolescence. Increasing dependence of medical professionals on equipment, both for diagnosis and treatment, demands their availability at all times through a comprehensive and responsive engineering support.

For the purpose of procurement, stocking, issue, repair and maintenance, the medical equipment is categorized as sophisticated equipment, electromedical equipment and nonelectro medical equipment. The 'sophisticated equipment', being state-of-the-art technology, is generally imported. The 'electro-medical equipment' is complex in design and contains electronic circuitry. The 'non-electro medical equipment' is relatively simple in design and covers all mechanical, electrical and optical equipment.

The life of equipment is to be determined on the basis of vintage in case of 'sophisticated' and 'non-electro medical' equipment. For 'electro-medical equipment', the twin criteria of vintage and usage is adopted. Later on, vintage as the sole basis for all categories of equipment. To cover the requirement of spares, accessories and maintenance stores during the initial period of warranty, an equipment maintenance system based on the concept of 'Complete Equipment Schedule' is provided along with the equipment by the OEM. On expiry of warranty, the repair and maintenance of all equipment is carried out through local purchase of spares and local repair contracts or Annual Maintenance Contracts (AMC) with trade.

The medical equipment life cycle is delicate and complicated. If we had to shave it down to four facts to remember, they'd look like this:

- Component suppliers will drop a product line in a heartbeat.
- Regulations make obsolescence management time-consuming.
- Careful planning in the design stage can patch up obsolescence issues.
- Your contract manufacturer should help you navigate component obsolescence.

Whether machines are usable or not.

Major equipment's are purchased in the year of 2020 except Trane & Sterling generators are purchased in year of 2017 or thereabout as per fixed asset register provided by the representative of the company. Presently Hospital was not in operation from last more than 1.5 years. We have inspected equipment's/machineries on 08/01/2024 and it is well maintained and in usable condition based on macroscopic inspection. Working of all the machines could not be examined. Hence few assumptions are made.

Vintage of the Plant & Machinery

Based on market inquiry, the main medical equipment's are not out dated as it is 3 years old only. It is proven technology and hence most of the equipment's can be upgraded as and when required in foreseeable future.

Degree of obsolescence of Equipments/Machinery

Obsolescence is a fact of modern technological life. Electronic devices used in healthcare may become obsolete for many reasons; for instance, outdated firmware, which poses security risks, or scarcity or unavailability of crucial components (especially evident during chip shortages). The medical device itself remains valuable and in demand. Therefore, it is in the interests of manufacturers, customers, and the environment to keep them on the shelves for as long as possible.

It is a highly lucrative industry. Nevertheless, companies producing medical products experience a distinctive set of challenges when medical devices face obsolescence, including the costs associated with developing a new medical product and the time taken to get it on the market, added to the environmental impact of discarding products in need of an upgrade.

When old medical devices become obsolete, a medical product company is left with limited options. They could start from scratch, creating a new product that could have associated with heavy costs. Furthermore, devices need to be tested, certified, and pass regulations, all of which may take four to five years before they get to market.

Given the prohibitive time and cost factors associated with developing entirely new medical devices, particularly for SMEs, innovative companies have found clever solutions to extend the lifespan of their valuable innovations.

Once a company has decided to renew its medical advice, several challenges emerge. The cost of running in-house medical technology R&D departments is high. Additionally, a company may lack the in-house expertise to tackle both the hardware and software aspects of modernising the device quickly. Perhaps an electronic device needs new field programmable gate arrays (FPGAs), or integrated circuits often sold off-the-shelf, that are no longer available. Bringing in an outside engineering partner requires knowledge about the original design and any other modifications made to find a workable solution to replace the missing part.

Other devices may run on extremely outdated software, such as a previous version of Windows CE from two decades ago, which almost certainly comes with security issues. While this is a problem in itself, the number of Windows CE engineers that have the knowledge to work on such devices is scarce globally.

This specialist knowledge usually comes with no instruction manuals and is no longer taught, so it would be a case of a software engineer recalling his/her niche knowledge of that software to update the medical device, which could take the form of rewriting the software in Linux for a hospital environment, for example. Or it could be a case of upgrading the software without altering the hardware. Or finding a replacement hardware component that is compatible with the software in question. An experienced team can deploy effective solutions where the modifications are so minor that recertification may not be required. Here, expert consultancy teams collaborate with accredited in-house technicians to ensure the delivery of a functional product to market.

In addition to expert knowledge of legacy operating systems, key skills to look for in a consultancy offering software services may include porting from old to new operating systems, removing bugs, and security updates.

Outsourcing the task of repurposing a device on the verge of obsolescence to a knowledgeable or experienced consultant can result in substantial cost and time savings.

To stay competitive and profitable in the medical technology era, it is prudent to explore the feasibility of updating and redesigning legacy products that are still useful. This is precisely what savvy companies, both large and small, are doing around the globe. The skill is finding

the right team with the right expertise to rescue obsolete products and deliver to market within time and budget constraints.

Maintenance of medical devices is either curative, in case of a failure of the device, or preventive. Preventive maintenance (PM) is undertaken either at constant time intervals or when a given parameter crosses a specified limit. The aim of PM is to amend wear from intensive use as well as from ageing. Normally, the modalities of PM are defined by the manufacturer who must anticipate the possible deficiencies of the device. Some manufacturers tend to recommend exaggerated maintenance procedures. Obsolescence of a medical device is defined by one of the following criteria:

a) Loss of its initial performances;

b) Development of medical techniques requiring a wider spectrum of performances;

c) Presence of new devices with improved securities.

Careful planning during the design stage can help avoid obsolescence issues.

Since major medical equipment's are purchased in the year 2020. However, Research and Development (R&D) in the industry of Medical Equipment's is rapid. The level of technology (Knowledge) keeps on progressing. Considering current level of technology in this industry, in our opinion presently the machinery has not become obsolete. For next 3 to 4 years degree of obsolescence is not expected to make them useless.

Machineries / Equipment's wise Residual Life

Total Life of medical equipment's is considered as 13 years & life of other utility equipment's considered as 15 years. Hence, based on total life and year of purchase, balance residual life is given in table above.

Comment on Whether Machine is New or Very old.

Trane & Sterling Generators are newly purchased in year of 2017 & other all medical equipment's/machineries are newly purchased in year of 2020 or thereabout. The physical condition is satisfactory. Obsolescence will be governed by future R & D.

• Fresh Certificate of Incorporation Consequent upon Change of Name bearing Corporate Identity No. U85100WB2008PTC130971 vide SRN B77250843 dated 17/06/2013,

issued by Government of India – Ministry of Corporate Affairs, Registrar of Companies, West Bengal.

- CRZ Clearance Certificate issued by Maharashtra Coastal Zone Management Authority under the reference no. CRZ-2012/CR-9/TC-2 dated 24/01/2013.
- Electricity Bill issued by Maharashtra State Electricity Distribution Co. Ltd. having Consumer No. 028659043260 under the Consumer Name of M/s Suasth Health Care (India) Pvt. Ltd. having Bill Amount of ₹ 1,39,84,100/- for the month of Nov. 2023.
- Permission for setting up of 33/11 KV electric substation under the reference no. SE/VC/Tech/No. 2094 dated 31/03/2012 issued by Maharashtra State Electricity Distribution Co. Ltd.
- Membership Registration Certificate of Mumbai Waste Management Limited having Unique Registration No. MWML/2023/05684 and having Membership No. PAN2131.
- Certificate of Registration for Pre-Conception & Pre-Natal Diagnostic Techniques Prohibition of Sex Selection Act, 2003 issued by Public Health Department having Registration No. MH/PMC/P-30 dated 24/01/2020 (valid up to 30/05/2024)
- Certificate for Combined Consent & BMW Authorization under RED Category to Health Care Establishment having consent no. Format 1.0/BO/UAN No. 63144/CAC-1908000413 dated 14/08/2019 issued by Maharashtra Pollution Control Board
- Business Suraksha Plus Variant 1 Policy No: 2999204806448401000 dated 31/07/2023 issued by HDFC ERGO General Insurance Company Limited.
- Balance Sheet as at 31/03/2023.

Notes:

- Original documents such as purchase bill / invoice of the machinery were not available for our perusal. Hence information regarding ownership, as told by the borrower, is believed to be correct. Few assumptions are also made.
- > This opinion is based on situation observed at the time of date of inspection.
- At the time of inspection, we found Hospital was not in operation from last more than 1.5 years. However, based on macroscopic observation, machineries and equipment's are well maintained.
