Energy saving by non-conventional method

Energy saving measures:

- Energy efficient fluorescent tube lights & CFL lamps which give approx. 30% more light output for the same watts consumed and therefore require less nos. of fixtures and corresponding lower point wiring costs. The life of T5 tubes is 2.5 to 3 times that of conventional tubes and hence the cost of replacement is quite less and hence rate of disposal of tubes reduced drastically.
- All fluorescent light fixtures will be specified to incorporate electronic ballast with THD less than 5% which has less watt-loss compared to electromagnetic ballast and result in superior operating power factor. Electronic chokes also improve the life of the fluorescent lamps.
- The UPS will be specified with high input power factor (close to unity) so that input KVA is restricted.
- UPS system is proposed with harmonic distortion restricted to less than 5% compared to far greater than 10% in many conventional UPS systems.
- Bus bars in all distribution panels are specified as copper bus-bars upto 150A to reduce losses and improve reliability.
- Copper conductor cables will be specified for sizes up to 16 sq mm, this will reduce losses and improve reliability.
- All cables will be de-rated to avoid heating during use. This also indirectly reduces losses and improves reliability.
- Power cable shall be used with XLPE insulation which can be operated at 90degC instead of PVC insulated cable at 70degC. Hence, improves reliability in the system.
- Variable frequency drives will be incorporated on motor feeders which will save considerable energy.
- Power factor of the complete electrical system will be maintained close to unity. This will reduce electrical power distribution losses in the installation.
- An APFC relay based on thyristor switching will be proposed to effect the power factor correction / improvement within a few cycles of deviation from the setting & also to reduce inrush currents.
- Solar operated pole lights will be proposed to power pathway lights at some strategic locations.
- Top five floors of tower shall be provided with solar water heating for flats.
- Occupancy Presence sensors & day-light sensors will be provided in the common areas & toilet inside flats.
- General lighting shall be through energy efficient fluorescent lamps and illumination levels shall be generally in line with National Building Code.
- 10% of common area / staircases / basement parking corridor lights shall be designated as emergency lights and shall be connected to individual inverters for uninterrupted illumination, which shall be further backed up by DG set.
- All WCs shall have dual flush cistern rather than single flush type & flush valve combination which will reduce consumption of water significantly.
- All common area and club house, low flow plumbing fixture shall be installed to conserve the water. For the residents, guide lines shall be given to use the efficient plumbing fixtures to conserve the water.
- The water supply to the tower is by gravity with booster pumps for the top floors
- Sewage Treatment Plant is installed for recycling the building waste and sewer water so that recycled water can be used after the tertiary treatment for flushing, irrigation purposes as applicable.
- The glasses for windows shall be used of low heat transfer co efficient (U) value.

Sharma

- Drip irrigation shall be used for the purpose of water horticulture to reduce the wastage of water.
- Residential Flats are proposed to be installed with energy efficient spill units instead of conventional Window units to reduce the saving in power significantly. The necessary guidelines shall be issued to the tenants as applicable.
- The building is designed to have natural ventilation in lift lobby which saves the energy required for mechanical ventilation.

The Energy savings is listed as follows:-

Energy saving measures:

- Energy efficient fluorescent tube lights & CFL lamps which give approx. 30% more light output for the same watts consumed and therefore require less nos. of fixtures and corresponding lower point wiring costs. The life of T5 tubes is 2.5 to 3 times that of conventional tubes and hence the cost of replacement is quite less and hence rate of disposal of tubes reduced drastically.
- All fluorescent light fixtures will be specified to incorporate electronic ballast with THD less than 5% which have less watt-loss compared to electromagnetic ballast and result in superior operating power factor. Electronic chokes also improve the life of the fluorescent lamps.
- The UPS will be specified with high input power factor (close to unity) so that input KVA is restricted.
- UPS system is proposed with harmonic distortion restricted to less than 5% compared to far greater than 10% in many conventional UPS systems.
- Bus bars in all distribution panels are specified as copper bus-bars upto 150A to reduce losses and improve reliability.
- Copper conductor cables will be specified for sizes up to 16 sq mm, this will reduce losses and improve reliability.
- All cables will be de-rated to avoid heating during use. This also indirectly reduces losses and improves reliability.
- Power cable shall be used with XLPE insulation which can be operated at 90degC instead of PVC insulated cable at 70degC. Hence, improves reliability in the system.
- Variable frequency drives will be incorporated on motor feeders which will save considerable energy.
- Power factor of the complete electrical system will be maintained close to unity. This will reduce electrical power distribution losses in the installation.
- An APFC relay based on thyristor switching will be proposed to effect the power factor correction / improvement within a few cycles of deviation from the setting & also to reduce inrush currents.
- Solar operated pole lights will be proposed to power pathway lights at some strategic locations.
- Top five floors of tower shall be provided with solar water heating for flats.
- Occupancy Presence sensors & day-light sensors will be provided in the common areas & toilet inside flats.
- General lighting shall be through energy efficient fluorescent lamps and illumination levels shall be generally in line with National Building Code.
- 10% of common area / staircases / basement parking corridor lights shall be designated as emergency lights and shall be connected to individual inverters for uninterrupted illumination, which shall be further backed up by DG set.
- All WCs shall have dual flush cistern rather than single flush type & flush valve combination which will reduce consumption of water significantly.
- All common area and club house, low flow plumbing fixture shall be installed to conserve the water. For the residents, guide lines shall be given to use the efficient plumbing fixtures to conserve the water.
- The water supply to the tower is by gravity with booster pumps for the top floors.
- Sewage Treatment Plant is installed for recycling the building waste and sewer water so that recycled water can be used after the tertiary treatment for flushing, irrigation purposes as applicable.
- The glasses for windows shall be used of low heat transfer co efficient (U) value.

Sharma

- Drip irrigation shall be used for the purpose of water horticulture to reduce the wastage of water.
- Residential Flats are proposed to be installed with energy efficient split units instead of conventional Window units to reduce the saving in power significantly. The necessary guidelines shall be issued to the tenants as applicable.
- The building is designed to have natural ventilation in lift lobby which saves the energy required for mechanical ventilation.

The Energy savings is listed as follows:-
