Valuation Report Prepared For: SBI/ Bharat Diamond Branch/M/s. Parmes Diamonds Exports LLP (10780//2308371) Page 11 of 33

The cost approach is a Real Property Valuation method which considers the value of a property as the cost of the land plus the replacement cost of the building (construction costs) minus the physical and functional depreciation. This approach is most commonly used for real estate properties that are not easily sold like schools, hospitals, government buildings and above type of property.

Land cost can be estimated using the Sales Comparison Approach by studying recent sales of land close to the subject property, and these sales should be comparable in size and location with subject property.

There are different ways to estimate replacement costs, the most common being finding out the cost to build a square foot of comparable properties multiplied by the total square footage of the building. The cost approach is commonly used for Residential Bungalow, Industrial Building and properties mentioned above.

As the property is an industrial land and building thereof, we have adopted Cost approach / Land and Building Method for the purpose of valuation. The Price for similar type of property in the nearby vicinity is in the range of government guideline rate for land and Structure thereof Considering the rate with attached report, current market conditions, demand and supply position, Land size, location, sustained demand for industrial building / Plot, all round development of commercial and industrial application in the locality etc.

We estimate ₹ 9,500.00 per Sq. M. for Land with appropriate cost of construction for valuation.

## 8. JUSTIFICATION FOR PRICE /RATE

The Market Value of the property is based on facts of markets discovered by us during our enquiries, however the government rate value in this case is less than the market value arrived by us. We are of the opinion that the value arrive by us will prove to be correct if an Auction of the subject property is carried out. As far as Market Value in Index II / Property Documents is concerned, it is not possible to comment on same, may be government rates are fixed by sampling during same point of time in part and whereas, Market values change every month.

In most of the cases the actual deal amount or Transaction value is not reflected in Index II / Property Documents because of various Market practices. As Valuer, we always try to give a value which is correct reflection of actual transaction value irrespective of any factors in market.

We Hope this will satisfy your requirements.

As a result of my appraisal and analysis, it is my considered opinion that the Fair Market Value for this particulars above property in the prevailing condition with aforesaid specification is ₹ 35,43,76,296.00 (Rupees Thirty Five Crore Forty Three Lakh Seventy Six Thousand Two Hundred Ninety Six Only). The Realizable Value of the above property is ₹ 31,89,38,666.00 (Rupees Thirty One Crore Eighty Nine Lakh Thirty Eight Thousand Six Hundred Sixty Six Only) and The Distress value of the property is ₹ 28,35,01,037.00 (Rupees Twenty Eight Crore Thirty Five Lakh One Thousand Thirty Seven Only)

#### Valuation Methodology

For the purpose of this valuation exercise, the valuation methodology used is Direct Comparison Approach Method and proposed Highest and Best Use model is used for analysing development potential.

The Direct Comparison Approach involves a comparison of the property being valued to similar properties that have actually been sold in arms - length transactions or are offered for sale. This approach demonstrates what buyers have historically been willing to pay (and sellers willing to accept) for similar properties in an open and competitive market and is particularly useful in estimating the value of the land and properties that are typically traded on a unit basis.

In case of inadequate recent transaction activity in the subject micro-market, the appraiser would collate details of older transactions. Subsequently, the appraiser would analyse rental / capital value trends in the subject micro-market in order to calculate the percentage increase / decrease in values since the date of the identified transactions. This percentage would then be adopted to project the current value of the same.

Where reliance has been placed upon external sources of information in applying the valuation methodologies, unless otherwise specifically instructed by Client and/or stated in the valuation, VCIPL has not
