The cost approach is a Real Property Valuation method which considers the value of a property as the cost of the land plus the replacement cost of the building (construction costs) minus the physical and functional depreciation. This approach is most commonly used for real estate properties that are not easily sold like schools, hospitals, and government buildings.

Land cost can be estimated using the Sales Comparison Approach by studying recent sales of land close to the subject property, and these sales should be comparable in size and location with subject property.

There are different ways to estimate replacement costs, the most common being finding out the cost to build a square foot of comparable properties multiplied by the total square footage of the building. The cost approach is commonly used for Residential Bungalow, Industrial Building and properties mentioned above.

As the property is a residential House thereof, we have adopted Cost approach / Market Approach Method for the purpose of valuation. The Price for similar type of property in the nearby vicinity is in the range of Rs.25,000.00 to Rs. 35,000.00 per Sq. M. for land Considering the rate with attached report, current market conditions, demand and supply position, Land size, location, upswing in real estate prices, sustained demand for Residential House / Plot, all round development of commercial and residential application in the locality etc. We estimate Rs. 30,000.00 per Sq. M. for Land with appropriate cost of construction for valuation.

The salability of the property is : Normal

Rental Income : Nil.

Any likely income it may generate: Rental Income.
