The cost approach is a Real Property Valuation method which considers the value of a property as the cost of the land plus the replacement cost of the Land(construction costs) minus the physical and functional depreciation.

The cost approach is a Real Property Valuation method which considers the value of a property as the cost of the land plus the replacement cost of the Land(construction costs) minus the physical and functional depreciation.

This approach is most commonly used for real estate properties that are not easily sold like schools, hospitals, government buildings and above type of property. Land cost can be estimated using the Sales Comparison Approach by studying recent sales of land close to the subject property, and these sales should be comparable in size and location with subject property. There are different ways to estimate replacement costs, the most common being finding out the cost to build a square foot of comparable properties multiplied by the total square footage of the building. The cost approach is commonly used for Residential Land, Residential Land properties mentioned above. As the property is an Residential land and Land there of, we have adopted Cost approach / Land and LandMethod for the purpose of valuation. The Price for similar type of property in the nearby vicinity is in the range of ₹ 35,000/- to ₹ 40,000/- per Sq. M. for land Considering the rate with attached report, current market conditions, demand and supply position, Land size, location, sustained demand for Residential Land/ Land, all round development of Residential and Residential application in the locality etc.

We estimate ₹ 38,500/- per Sq. M. for Land with appropriate cost of construction for valuation.

The salability of the property is: Good
Likely rental values in future in: N.A.
Any likely income it may generate

Valuation Methodology

For the purpose of this valuation exercise, the valuation methodology used is Direct Comparison Approach Method and proposed Highest and Best Use model is used for analysing development potential.

The Direct Comparison Approach involves a comparison of the property being valued to similar properties that have actually been sold in arms - length transactions or are offered for sale. This approach demonstrates what buyers have historically been willing to pay (and sellers willing to accept) for similar

properties in an open and competitive market and is particularly useful in estimating the value of the land and properties that are typically traded on a unit basis.

In case of inadequate recent transaction activity in the subject micro-market, the appraiser would collate details of older transactions. Subsequently, the appraiser would analyse rental / capital value trends in the subject micro-market in order to calculate the percentage increase / decrease in values since the date of the identified transactions. This percentage would then be adopted to project the current value of the same.

Where reliance has been placed upon external sources of information in applying the valuation methodologies, unless otherwise specifically instructed by Client and/or stated in the valuation, VCIPL has not independently verified that information and VCIPL does not advise nor accept it as reliable. The person or entity to whom the report is addressed acknowledges and accepts the risk that if any of the unverified information in the valuation is incorrect, then this may have an effect on the valuation.
